

# Hello, I'm Bryan Zane.

I'm a full stack developer!

[View my work ↓](#)

## About

I am a Bachelor's in Computer Science from [REDACTED] University. I graduated in 2024, fueled by a strong passion for problem-solving and technology. My skill set includes front-end technologies like React and JavaScript, as well as back-end expertise in C++, Python, and SQL. I am an exceptional problem solver, capable of developing creative solutions to challenging problems. I have experience working on projects ranging from a Database with over 1 million tuples, or an academic research paper. I am also a member of several tech clubs and have presented my work at various conferences and research forums. Outside of coding, I enjoy surfing, gaming, fitness, and traveling. I am always looking to learn new skills and continuously striving for personal growth.

## Front-End

React

TypeScript

## Back

C++

SQL

## Tools

Git

Jira

## Projects

ng team success

### ros

and NFL draft outcomes

### Conference Clash: Offensive Evolution

For the query about how offensive and defensive metrics have evolved within conferences

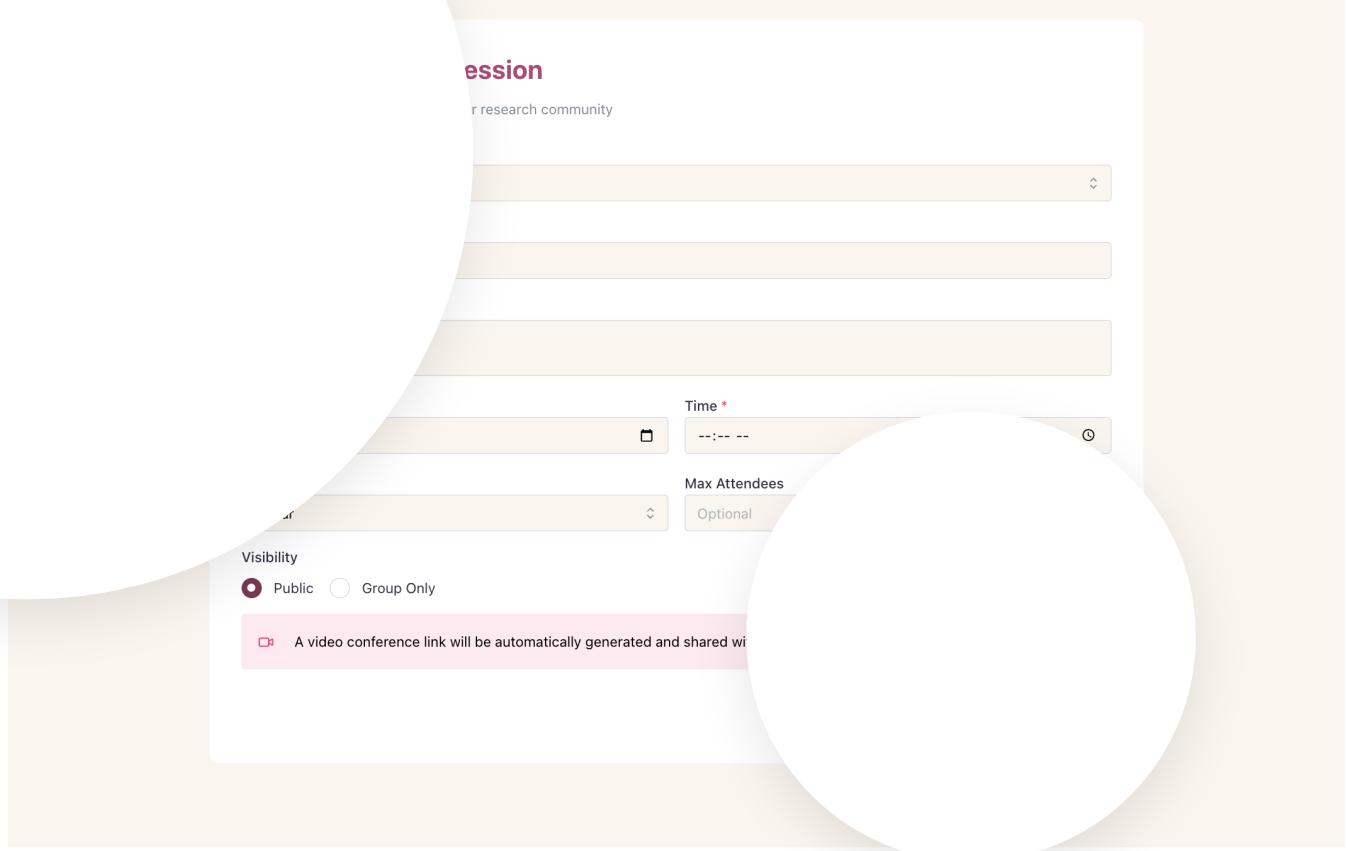

# College Football Database

A React and .NET platform with Oracle for analyzing college football data.
